

Netflix Dashboard Report

1. Introduction

The **Netflix Dashboard** is an interactive Power BI report developed to analyze Netflix content and audience-related data. The dashboard provides a clear visual representation of movies, TV shows, genres, ratings, countries, audience categories, subscription types, and viewing behavior.

The main objective of this dashboard is to convert raw Netflix data into meaningful insights that can help understand **content distribution, audience preferences, ratings, and viewing patterns**. Interactive charts, graphs, filters, and key performance indicators make the analysis easier to understand.

2. Dashboard Analysis

Overview

The Overview section provides a summary of the Netflix content library. It presents important information about the number of movies and TV shows, countries, ratings, and content distribution. The analysis helps identify the overall structure and diversity of Netflix's content.

The country-wise analysis shows that Netflix has a wide international presence, with content available from different regions. The comparison between movies and TV shows also helps understand the major content categories available on the platform.

Audience Insight

The Audience Insight section focuses on viewer behavior and preferences. It analyzes factors such as **age groups, subscription types, watch time, and ratings**.

The analysis helps identify differences in audience engagement and provides an understanding of how viewers interact with Netflix content. Watch-time analysis can be used as an indicator of audience interest, while age-group and subscription analysis provide useful information about the audience base.

Series Vault

The Series Vault section provides detailed information about Netflix titles. It focuses on content characteristics such as **movies, TV shows, directors, cast, ratings, countries, and content additions over time**.

This section helps users explore the Netflix library in greater detail and identify patterns in content production and distribution.

Genres & Rating

The Genres & Rating section analyzes content based on **genres and ratings**. It helps identify the types of content available and compare their ratings.

Country-wise ratings and watch-time analysis also provide useful insights into regional audience engagement. This section can help determine which genres and content categories are more successful or preferred by viewers.

3. Key Findings

The major findings from the dashboard are:

- Netflix has a **large and diverse content library** consisting of movies and TV shows.
- Content is distributed across **multiple countries and regions**, showing Netflix's global reach.
- Audience behavior differs according to **subscription type, age group, and viewing time**.
- Ratings provide an important measure for understanding **content quality and audience preference**.
- Genre analysis helps identify the different types of content available and their relative performance.
- Country-wise analysis provides insights into **regional viewing patterns and content ratings**.
- The dashboard makes it easier to identify trends and compare different content categories through interactive visualizations.

4. Conclusion

The Netflix Dashboard provides an effective way to analyze Netflix content and audience data using Power BI. It combines different dimensions such as **content type, country, genre, rating, audience, subscription, and watch time** into a single interactive report.

Overall, the dashboard helps users understand Netflix's content distribution and audience behavior in a simple and visual manner. The insights obtained can support better understanding of **viewer preferences, content performance, regional trends, and future content strategies**.

Thus, the dashboard demonstrates how Power BI can be used to transform large datasets into meaningful and actionable business insights.
